, Biol. 153:250-258(1992).

FUNCTION: PARRICIFIATES IN THE BREAKDOWN OF THE EGG ENVELOPE,
WHICH IS DERIVED FROM THE EGG EXTRACELLULAR MATRIX, AT THE TIME
OF HATCHING. THUS ALLOWING THE NEWLY HATCHED FISH TO SWIM FREE.
HCE BINDS TIGHTLY TO THE EGG ENVELOPE WHILE IT EXERTS THE
CHORIOLYTIC SWELLING ACTION.

CATALYTIC ACTIVITY: HYDROLYSIS OF THE INNER LAYER OF FISH EGG
ENVELOPE. ALSO HYDROLYSES CASEIN AND SWALL MOLECULE SUBSTRATES
SUCH AS SUCLEU-LEU-VAL-TYR-I-MCA.

COFACTOR: BINDS ONE ZINC ION.

COFACTOR: BINDS ONE ZINC ION.
                                                                                                                                                                                                                     DÉVELOPMENTAL STAGE: PRODUCTION OF THE PROTEIN STARTS IN DAY 2 TO DAY 3 EMBRYOS AND INCREASES THEREAFTER UNTIL HATCHING.
PTM: O-GLYCOSYLATED (PROBABLE).
MISCELLANEOUS: IN MEDAKA THE HATCHING ENZYME SYSTEM IS COMPOSED TWO DISTINCT PROTEASES, THE HIGH CHORIOLYTIC ENZYME (HCE), OF WHICH THERE ARE TWO ISOFORMS, AND THE LOW CHORIOLYTIC ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 CMYGGVTEHEGN 12

"Molecular cloning and characterization of a gibberellin-inducible,

"Molecular cloning and characterization of a gibberellin-inducible,

putative alpha-glucosidase gene from barley.";

Plant Mol. Biol. 30:229-241[1996).

-1- CATALYTIC ACTIVITY: HYDROLYSIS OF TERMINAL, NON-REDUCING

1.4-LINKED D-GLUCOSE RESIDUES WITH RELEASE OF D-GLUCOSE.

-1- TISSUE SPECIFICITY: HIGH LEVELS SEEN IN THE ALEURONE AND SCUTELLUM

AFTER GERMINATION, WHILE LOW LEVELS ARE FOUND IN DEVELOPING SEEDS.

-1- DEVELOPMENTAL STACE: LEVELS INCREASE STEADILY THROUGHOUT

IMBIBITION REACHING MAXIMUM LEVELS AT DAY 7. DURING GERMINATION,

LEVELS INCREASE FROM DAY 2, REACH MAXIMUM LEVELS AT DAY 3 AND

DECLINE ACTES DAY 5.

Nuclei acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies for pyrogenic exotoxin related diseases. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation thereapy and the control of the peptides can be used in immunotherapy and immunoprophylaxis when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    exotoxins) constitute a family of structurally related toxins which share similar biological activities. They stimulate CD4+, CD8+ and gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) elements on the lateral face of the T-cell receptor (TCR) while simultaneously binding the lateral face of the class II major histocompatibility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one starballocomes are starballocomes and service and both the

vaccine; antibody.

```
CC exotoxins) constitute a family of structurally related toxins which CC share similar biological activities. They stimulate CD4+, CD8+ and CC gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) CC elements on the lateral face of the T-cell receptor (TCR) while CC simultaneously binding the lateral face of the class II major CC histocompatibility complex (MHC) of antigen presenting cells. This causes CC aberrant proliferation of T-cells, which stimulates other components of CC the immune system, causing injury to the host. The peptides are used to CC prevent, treat or protect against toxic shock and septic shock resulting CC from bacterial infections in mammals, particularly humans. The peptides CC are used for inducing serum antibodies that bind at least one CC stabpylococcal enterotoxin or streptococcal exotoxin and both the CC diagnosis of disease related to the presence of bacterial toxins. Nucleic acids encoding a peptide of the invention can be used for the production of the production and the contribute for a discount of the production can be used for the production of the production of the production can be used for the production of the production of the production of the production can be used for the production of the production of the production can be used for the production of the production of the production can be used for the production of the production o
                                   of the peptides for diagnostic reagents, as vaccines and for theraples for pyrogenic exotoxin related diseases. Vectors expressing high levels of the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation therapy to prevent or increase resistance to toxic shock syndrome or septic shock and to ameliorate the effects of conditions associated with the presence of staphylococcal or streptococcal pyrogenic toxins. The amino acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences AAY97844-Y97852 represent conserved region 1 of various Staphylococcus aureus enterotoxins and croup A streptococci pyrogenic toxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        x9-x10-x11-x12-x13-p-x14-x15-x16-R-x17-x18-x27-x19-x20-x21-x22-x23-x24-y (AAY97864), where: x1, x8, x13 and x24 are each independently selected from L, I and V; x2,x4, x5, x6, x7, x9, x10, x11, x12, x14, x15, x16, x17, x18, x19, x20, x21, x22 and x23 are each independently selected from the group consisting of any amino acid; x3, x5 and x26 are each independently selected from the group consisting of any amino acid and of no amino acid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and septic shock caused by the staphylococcal and streptococcal pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel peptides (AAY97838-Y97843) comprising a consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphylococcus aureus enterotoxins and streptococcal pyrogenic toxins. Consensus region 1 a preferred consensus region 1) has the sequence X25-X26-Y-G-X1-T-X2-X3-X4-X5-N (AAY97863) and consensus region 2a (a preferred consensus region 2) has the sequence K.X6-X7-X8-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-OCT-1998;
18-JUN-1999;
Group A streptococci pyrogenic exotoxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 x27 is either L or Y.

The invention also relates to serum antibodies induced by the peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 1; Page 72; 115pp; English

                                                                                                                                        The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious

                                                                            22-DEC-1998
                                                                                                        AAW72424;
                                                                                                                            AAW72424 standard; peptide; 14 AA.
                                                                                                                                                                                                                                                                                                                                        The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious effects of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2184
                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a peptide from region 1 of staphylococcal enterotoxin SEC.

                                                                                                                                    Staphylococcal/streptococcal pyrogenic toxin-derived peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                          x1, x8, x13 and x24 = L, lor y; x3, x25 and x36 = any anino acid (aa) or are absent; x27 = L or y; all other x may be any aa. The peptides can be used to generate serum antibodies (Ab) that bind at least one staphylococcal enterotoxin (SE) or streptococcal endotoxin (SED, Ab are used: (i) for diagnostic detection of SPEA or SEA, SEB and SED, in usual immunoassays; (ii) to inhibit blastogenesis of human mononuclear cells in presence of these toxins (i.e. to protect against or alleviate toxic shock or autoimmune disease associated with bacterial infections); and (iii) for passive immunisation against effects of the toxins. The peptides generate Ab that are cross-reactive with toxins from a variety of bacteria. The present sequence represents a specifically claimed example of a peptide of the present invention.

CC share similar biological activities. They stimulate CD4+, CD8+ and CC elements on the lateral face of the T-cell receptor (YCR) while CC simultaneously binding the lateral face of the Class II major Simultaneously binding the lateral face of the class II major CC aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to protect against toxic shock and septic shock resulting CC from bacterial infections in mammals, particularly humans. The peptides are used for inducing serum antibodies that bind at least one CC staphylococcal enterotoxin or streptococcal exotoxin and both the CC epetides and antibodies can be used in diagnostic assays to aid in the CC epetides and appetide of the invention can be used for the production CC of the peptides can be used in immunotherapy and immunophylaxis when CC of the peptides can be used in immunotherapy and immunophylaxis when CC the presence of staphylococcal antibodies are used for passive immunisation CC the peptides can be used in immunotherapy and immunophylaxis when CC the presence of staphylococcal or streptococcal pyrogenic toxins. The antibodies are used for passive immunisation CC the presence of staphylococcal or streptococcal pyrogenic toxins. The CC amino acid sequences of the peptides are sufficiently common that they CC am be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences AAY97838-Y978343 represent the Staphylococcus aureus and Group A streptococcal pyrogenic toxins. The CC for protection against or amelioration of toxic or septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention also relates to serum antibodies induced by the peptides which provide protection against, or reduce the severity of toxic shocl and septic shock caused by the staphylococcal streptococcal pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the group consisting of any amino acid;
x3, X5 and X26 are each independently selected from the group consisting of any amino acid and of no amino acid;
x27 is either L or Y.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (AAX97864), where: x1, x8, x13 and x24 are each independently selected from L, I and V; x2,x4, x5, x6, x7, x9, x10, x11, x12, x14, x15, x16, x17, x18, x19, x20, x21, x22 and x23 are each independently selected from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphylococcus aureus enterotoxins and streptococcal pyrogenic toxins. Consensus region 1 (a preferred consensus region 1) has the sequence x25-x26-y-G-G-X1-T-X2-X3-X4-X5-N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel peptides (AAY97838-Y97843) comprising consensus amino acid sequence derived from two conserved regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2000-303782/26

The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV.

The peptides can be used to generate serum antibodies (Ab) that bind at least one staphylococcal enterotoxin (SE) or streptococcal endotoxin (SEP). Ab are used: (1) for diagnostic detection of SPEA or SEA, SEB and SED, in usual immunoassays; (ii) to inhibit blastogenesis of human mononuclear cells in presence of these toxins (i.e. to protect against or alleviate toxic shock or autoimmune disease associated with bacterial infections); and (iii) for passive immunisation against effects of the toxins. The peptides generate Ab that are cross-reactive with toxins from a variety of bacteria. The present sequence represents a specifically claimed

CC pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and Ct the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which CC share similar biological activities. They stimulate CD4+, CD8+ and CC gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) CC elements on the lateral face of the T-cell receptor (TCR) while CC simultaneously binding the lateral face of the class II major CC simultaneously binding the lateral face of the class II major CC simultaneously binding the lateral face of the class II major CC aberrant proliferation of T-cells, which stimulates other components of CC the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting CC from bacterial infections in mammals, particularly humans. The peptides care used for inducing serum antibodies that bind at least one Staphylococcal enterotoxin or streptococcal exotoxin and both the CC diagnosis of disease related to the presence of bacterial toxins. Nucleic CC drids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies CC of the peptides can be used in immunotherapy and immunoprophylaxis when CC septic shock and to ameliorate the effects of conditions associated with the effects of conditions associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention also relates to serum antibodies induced by the peptides which provide protection against, or reduce the severity of toxic shock and septic shock caused by the staphylococcal and streptococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (AAX97864), where: X1, X8, X13 and X24 are each independently selected from L, I and V; X2,X4, X5, X6, X7, X9, X10, X11, X12, X14, X15, X16, X17, X18, X19, X20, X21, X22 and X23 are each independently selected from the group consisting of any amino acid; 33, X5 and X26 are each independently selected from the group consisting of any amino acid; and of no amino acid; 32, X5 and X26 are each independently selected from the group consisting of any amino acid and of no amino acid; 327 is either L or Y.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence x25-x26-Y-G-G-X1-T-X2-X3-X4-X5-N (AXY97863) and consensus region 2) has the sequence K-X6-X7-X8-the sequence K-X6-X7-X8-X1-X13-X15-X16-X-X17-X18-X27-X19-X20-X21-X22-X23-X24-Y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel peptides (AAY97838-Y97843) consensus amino acid sequence derived from two conserved re (regions 1 and 2) of Staphylococcus aureus enterotoxins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; Page 88; 115pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    amino acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences AAY97838-Y978343 represent the synthetic peptides based on consensus consensus regions 1 and 2 of Staphylococcus aureus and Group A streptococcal pyrogenic toxins. These peptides can be administered to a mammal to raise serum antibodies for protection against or amelioration of toxic or septic shock.
                                              The peptide, nucleic acid encoding the peptide and antibody (Ab) produced against the peptide are useful for inhibiting blastogenesis of mononuclear cells (eg. T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimnune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious
                                                                                                                                                                                                                                                                Providing protection against, and reducing the severity of, human immunodeficiency virus infections and associated deleterious effeusing peptides from homologous sequences of staphylococcal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              streptococcal pyrogenic exotoxin;

                pyrogenic toxins. The pyrogenic exotoxins of Group A streptococci and the enterotoxins of Staphylococcus aureus (which are also pyrogenic exotoxins) constitute a family of structurally related toxins which share similar biological activities. They stimulate CD4+, CD8+ and gamma-delta+ T-cells by binding the beta-chain variable region (V-beta) elements on the lateral face of the T-cell receptor (TCR) while simultaneously binding the lateral face of the class II major histocompatibility complex (MHC) of antigen presenting cells. This causes aberrant proliferation of T-cells, which stimulates other components of the immune system, causing injury to the host. The peptides are used to prevent, treat or protect against toxic shock and septic shock resulting from bacterial infections in mammals, particularly humans. The peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the group consisting of any amino acid; x3, x5 and x26 are each independently selected from the group consisting of any amino acid and of no amino acid; x27 is either L or Y.

The invention also relates to serum antibodies induced by the peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (regions 1 and 2) of Staphyrocucus unreal consensus region 1a (a preferred streptococcal pyrogenic toxins. Consensus region 1a (a preferred consensus region 1) has the sequence X25-X26-Y-G-G-X1-T-X2-X3-X4-X5-N consensus region 2) his
                                                                                                                                                                                                                                                                                                                                                                                                               which provide protection against, or reduce the severity of toxic and septic shock caused by the staphylococcal and streptococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel peptides (AAY97838-Y97843) comprising consensus amino acid sequence derived from two conserved regions (regions 1 and 2) of Staphylococcus aureus enterotoxins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 4; Page 88; 115pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptides useful for preventing syndrome and septic shock from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-303782/26.

Nucleic acids encoding a peptide of the invention can be used for the production of the peptides for diagnostic reagents, as vaccines and for therapies confirmed to the peptides can be used in immunotherapy and immunoprophylaxis when expressed in humans. The antibodies are used for passive immunisation conterapy to prevent or increase resistance to toxic shock syndrome or septic shock and to ameliorate the effects of conditions associated with the presence of staphylococcal or streptococcal pyrogenic toxins. The canno acid sequences of the peptides are sufficiently common that they can be used for eliciting antibodies which are cross-reactive with toxins derived from various bacteria. Sequences ANY97838-Y978343 represent the staphylococcus aureus and Group A Streptococcal pyrogenic toxins. The caphylococcus aureus and Group A Streptococcal pyrogenic toxins are consequences of the peptides are used for eliciting antibodies.
                                                                                                                                     Providing protection against, and reducing the severity of, human immunodeficiency virus infections and associated deleterious effections peptides from homologous sequences of staphylococcal and

```

The present sequence is peptide #6348, a cross-linked polymer derived from the homologous sequences of staphylococcal enterotoxin and streptococcal pyrogenic exotoxin.

The peptide, nucleic acid encoding the peptide and antibody (Ab) produces the peptide of the peptide of the peptide of the peptide and antibody.

encoding the

antibody (Ab) produced

T cells) in the presence of human immunodeficiency virus (HIV), inhibiting HIV replication and protecting a mammal against the deleterious effects of HIV. The peptide is also used to ameliorate the effects of autoimmune diseases associated with the presence of HIV. The Ab is used for passively immunising a mammal against the deleterious
                                                                                                                                                                                                                                                                             SEC3 was isolated and purified from S.aureus. It can be used for treating cancer, activating cytokine mediators and procoagulant systems, augmenting natural killer cell cytotoxicity, etc. The enterotoxin can be administered intravenously, optionally with ibuprofen to attenuate toxic reaction to SEC3. Synthetic polypeptides having structural homology to Staphylococcal exotoxins are claimed, provided the homology includes statistically significant sequence homology, alignment of Cysteine residues and see AAR13203-R13211.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylococcus aureus.

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score
